

It has come to our attention that a seller on eBay is peddling Nutserts for the main skid plate that is held on with 6 Nutserts. Potential customers should be aware they are the lighter duty nutsert that the factory used to hold on the 03-06 automatic transmission skid.

They are used in a 11/16" hole which is .680" or so. The large flange heavy duty OEM nutsert for the main skid fits a 5/8" or .625" hole.

Shown below are the OEM Nutserts for the belly skid in both metric (goldish color) and SAE (silver color)

This is the light duty 11/16" hole eBay nutsert.

This is the OEM version for the automatic transmissions skid plate in the 03-06 TJ.
